

Push to connect Suspension Air Kit

**New Push to Connect
Air Suspension Kit**

BPW Transpec has recently switched over to push to connect fittings for the air suspension kits.

Push to connect fittings make for quicker and simpler air suspension kit installation with fewer parts.

Push to connect fittings do not require pipe connection olives and do not need to be tightened with a spanner.

These new air suspension kits will also be easier to stock and to pick.

The kits will be supplied by BPW Transpec as pre-boxed kits with the air tank, air tank brackets and PK30PTC-K or PK31PTC-K air line.

The Hight Control Valve (HCV) in the new air suspension kits is a polymer body unit rather than the current alloy bodied unit.

The same kits are to be used for the tri-axle and tandem axle suspension kits. with single axle suspension kits add 2 line caps and for quad axle suspension kits simply add 2 tee pieces.

Dolly and Dog trailer air suspension kits will be made available at a later stage.

Initially there will be two base kits available - with either a metric tank suspension system or an imperial tank suspension kit for the tri-axle or drawing numbers - PK30PTCCm and PK31PTCCI.

**Poly Body Height
Control Valve (HCV)**
